Subject: demolition plans to remove building 4024

To the board members at Boeing and the department of energy. I apologize for not commenting sooner. I was at the February 21st meeting concerning the removal of building 4024.

I am a concerned citizen, concerned with the radiation that already affects us from the uncontained nuclear meltdown's that did occur up there, as well as the nuclear waste that was dumped up there. Our concern as people living in the surrounding communities is that we have very strong winds. It is a fact that nuclear radiation is spread through the wind.

I heard about the plan's of the removal of building 4024. The sawing of the huge concrete blocks that are contaminated, and moving those parts of a building that has been said that it is so complex and big it should never be moved, I believe that the plans of demolition and removal of building 4024 should not be carried through. Also, I felt at the February 21st meeting that you people representing Boeing and Doe were more interested in YOUR best interest's instead of the communities.

What would be the point in moving around and stirring up RADIATION? And why would it be moved anyway? The land is not safe to build on. It would be better to leave building 4024 intact, as is. We already have enough radiation living close to the former rocketdyne facility. And now you people want to stir up more. It can not be allowed. Forgive me for being so blunt, but those plan's SHOULD in every way be RECONSIDERED! There are thousands of lives at stake here. Please listen to the voice's of Reason. Thank you very much for your time!! - Brigham
