Subject: SSFL - Removal of Building 4024

Mr. Thomas Johnson,

I have a few questions to ask in relation to the removal of Building 4024 at the Santa Susanna Field Lab.

- 1) One goal of the cleanup is for the land to be reused. Does this include possible future residential use? Agricultural?

- 2) Will radioactively contaminated materials be stored at/in Kettleman hills?
 Why is Kettleman hills considered suitable for storage?

- 3) Will the excavated earth be sealed during transport? is this excavated earth also going to Kettleman Hills?

- 4) How will the workers performing the decontamination be informed and protected from exposure?

Thank you for time,
John Hofius
